# FEEDBACK ON THE PROGRAM

---

Wang Jianyu (China),  
second-year student of The Program

I am very satisfied with our Master Degree program. I think teachers are very responsible to their students. In the master's degree program of financial market and financial institutions, I learned practical professional knowledge and was consolidated in practice.

The course arrangement has logic and system. In addition to professional related courses, there are other disciplines to help us better complete the master's study. Even online classes, teachers are very patient and responsible to teach us.

The rich and colorful interaction between teachers and students in class makes the class active, which is an experience I have never had.

Class assignment forms are very diverse, so we can consolidate the classroom learning content in an all-round way, and fully cultivate our scientific research ability and thesis writing skills.

# FEEDBACK ON THE PROGRAM

Khodary Mohanad (Egypt),  
second-year student of The Program

The Master's Program is a relatively new program catering towards students wishing to pursue their careers in the financial sector. The professors are very motivated to teach this specialty. It is not only an education program about finance but more importantly how finance can help build a better life for all.

I learned not only technical financial terms but also got a much deeper meaning of the financial markets which I have always wanted to understand. I feel very lucky to have selected this course. It has brought me the skills to make more rational decisions in my life which will help me in my future career.

The strongest point of this program is the simplicity with which professors convey the importance and relevance of finance in today's world. Although the course content may not dive deep into how a particular stock market operates, or how certain stocks move, it does provide insight into the importance and relevance of the stock market in our current society and how human behavior is expressed through politics and law that can lead to both financial progress as well as crises.

Teachers are extremely helpful and are always willing to support and guide the students in their activities including course work and dissertations. I would recommend this program to students from all over the globe.
